METHOD AND DEVICE FOR ELECTROSTATIC ATOMIZATION AND PRECIPITATION OF COATING MATERIAL. [1961] 4p. (4 figs. omitted).
Order from LC or SLA mi$1.80, ph$1.80 61-10501

Trans. of German patent interpretation no. 1027113, cl. 75c, internat, cl. B 44 d, appl. 12 Dec 52, pub. 27 Mar 58.

The method is characterized by the fact that the atomizing takes place by means of high electrical alternating potential of high-frequency voltage, or pulsating direct potential and that the produced fog or dust is deposited by an electrical direct potential field which may be pulsating. By the use of these various electric fields which in a continued development of the invention may be produced in a simple manner by one and the same generator, especially effective atomizing and precipitation becomes possible.
